A3 No. and Name	Team members (name & role)	Stakeholders (name & role)	Department	Organisation objective
Reduce Dispatcher Late Status Errors	1. Rick Sousa, OM 2. Phil Gil, SS 3. Dispatchers 4. Supervisors	1. Jay Malik, GM 2. 3. 4.	Operations for WCD Account	Customer Satisfaction
Team Leader (name & 'phone ext)				**Start date & planned duration**
				01/15/16 - 6/13/16

1. Clarify the problem

Is: Dispatcher inaccurately or fails to report late code.

Is not:

Dispatcher checking in drivers.

Problem statement:

Currently all lead operators agree there are too many time consuming data-entry errors caused by the cumbersome TM interface when clerks have to make edits after load has been di

Drop Stop Arrival SEC description

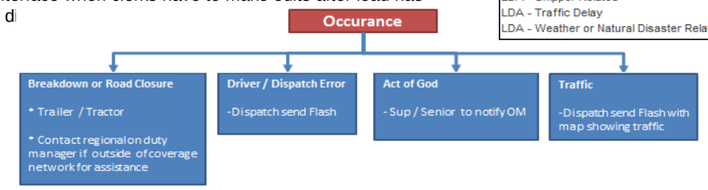
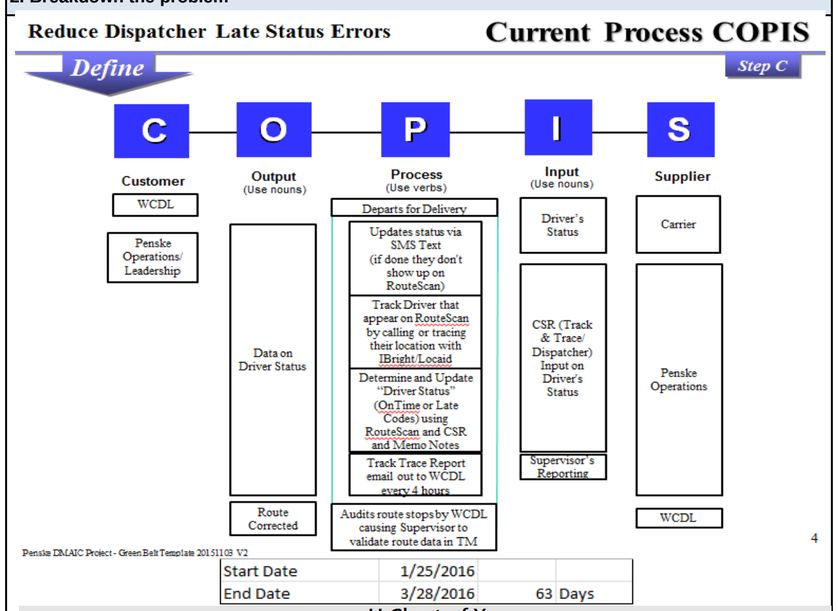
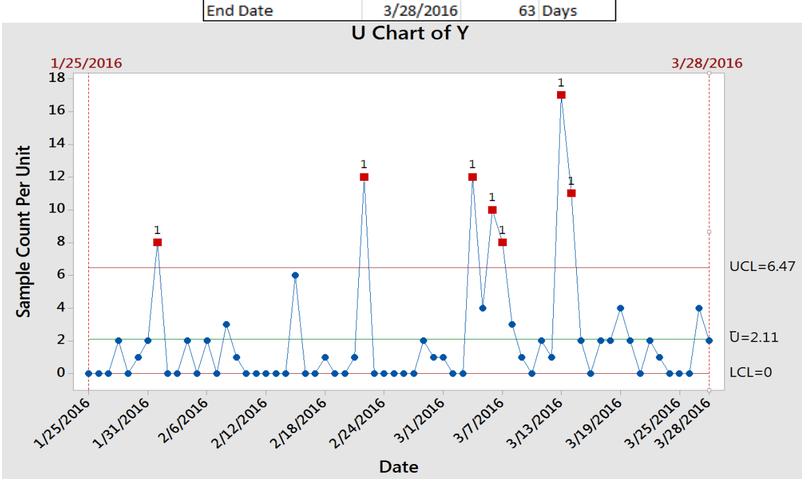
LDA - Previous Stop
LDA - Shipper Related
LDA - Traffic Delay
LDA - Weather or Natural Disaster Related



2. Breakdown the problem



Start Date	1/25/2016		
End Date	3/28/2016	63	Days



3. Set the Target

1	Reduce Dispatcher Late Status entries having 2 or more errors from 36.07% to 14% by June 13, 2016.

4. Analyse the Root Cause

Chi-Square Test for Association: Defects?, All Dispatchers

Rows: Defects? Columns: All Dispatchers

	Dianna Resendiz	Maria Gonzales	Jennifer Catrina	April Castaneda	Ron Sewell	Yer Lee	Jennifer McCall	Angel Cline

Cell Contents: Count
Expected count
Contribution to Chi-square

Pearson Chi-Square = 18.014, DF = 7, P-Value = 0.012
Likelihood Ratio Chi-Square = 15.617, DF = 7, P-Value = 0.029

Maria, April, and Yer appear to have a higher likelihood of committing defects with their given volume of stops.

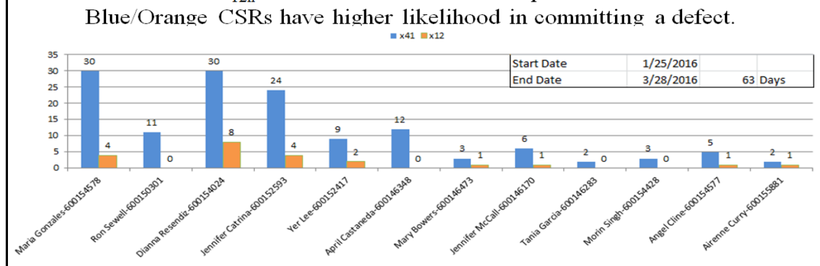
Although Diana has 30 defects she still manages to do less errors with her given high volume of stops.

Ron and Jennifer are doing 2 defects less than expected with their given volume of stops.

H0	no difference
H1	difference, P value < .05

	Maria Gonzales-600154578	Ron Sewell-600150301	Dianna Resendiz-600154024	Jennifer Catrina-600152593	Yer Lee-600152417	April Castaneda-600146348	Mary Bowers-600146473	Jennifer McCall-600146170	Tania Garcia-600146283	Morin Singh-600154428	Angel Cline-600154577	Airenne Curry-600155881
X_{41}	30	11	30	24	9	12	3	6	2	3	5	2
X_{12}	4	0	8	4	2	0	1	1	0	0	1	1

X_{41n} is the number of defects per CSR
X_{12n} is the number false defects per CSR
Blue/Orange CSRs have higher likelihood in committing a defect.



5. Develop Countermeasures

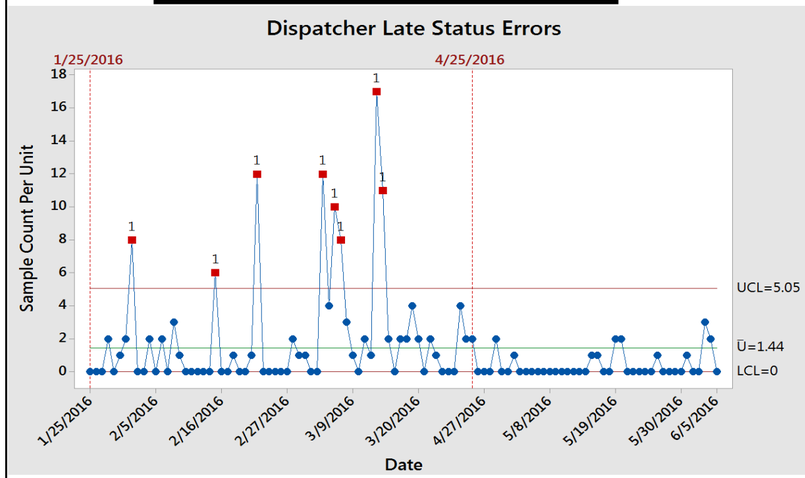
	Countermeasure	Impact on target
1	Review training on all CSR associates (see comment)	Eliminate errors committed by all CSR.
2	Create BI query that Supervisor can use similarly to current OM/SS use to audit late code entries by CSR.	Ensure errors committed by all CSR are addressed by shift and individual immediately before reaching OM/SS audit report.
3	Add second field that CSRs have mistakenly entered correct Late Code data to current OM/SS BI query used to audit late codes entries.	Eliminate data entry on wrong field.

6. Implement Countermeasure

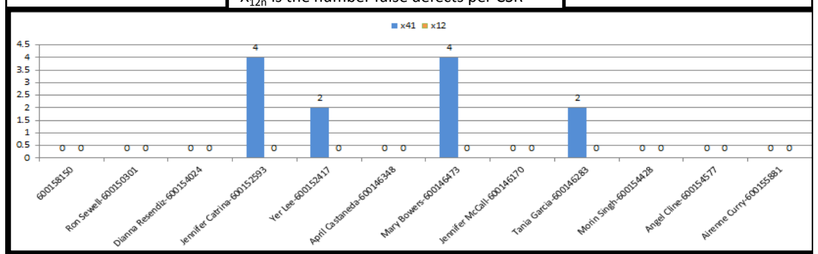
All 3 above implemented.

7. Monitor Results & Process

Start Date	4/25/2016		
End Date	6/6/2016	42	Days



X_{41n} is the number of defects per CSR
X_{12n} is the number false defects per CSR



8. Standardise & Share Success

	Before	Target	Actual
2+ Late Errors per Week	36.07%	14%	11.63%

Dispatcher Late Status entries having 2 or more errors have reduced after pilot launch on April 25, 2016.

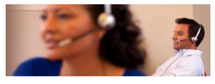
Operations really pulled through on turning this around and taking full ownership of the process. There are still 4 CSRs that might need supervision but for the most part the process has improved.

How can we maintain the Improvements?

Collect Y data for every week.

How can we control/monitor the process?

> Implement Statistical Process Control U-Chart to track Y data.

> When process regresses out-of-control,


Senior Supervisor meets with corresponding Supervisor overseeing culprit CSRs and review implemented procedures.
